

## ON-SURF - Mobilizing Technological Skills in Surface Engineering

onsurf.teandm.pt

Project n.º POCI-01-0247-FEDER-024521

Incentive System for Innovation and Technological Development  
Measure: Mobilizing Programs

Total Eligible Cost: 5.445.445,85€

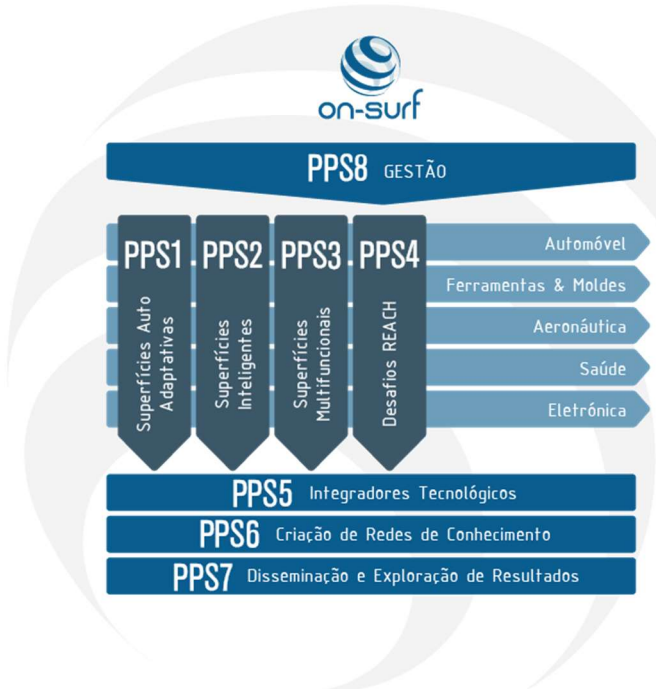

Financial support: FEDER - 3.721.804,89€

Period of execution: 01-10-2018 a 30-09-2021

The ON-SURF project is a Mobilizing Program that involves national companies from different sectors of activity and non-business entities from R&D+i, in a broad consortium, around the priority axis in the International Innovation Agenda, Surface Engineering.

It is intended to develop and apply surface modification processes that promote advanced and innovative solutions in different sectors of activities, such as Automotive, Aeronautics, Molds & Tools, Health and Electronics; aligned with the strategic objectives of the National Clusters: Health Cluster Portugal, EnergyIN, Engineering & Tooling, Mobinov, Produtech, Tice.pt.

The project involves companies positioned throughout the value chain, surface modifiers, solution applicators and end users, aiming to be an embryo for a broader initiative that aims to bring to the fore a set of scientific and technological competences, recognized to exist in Portugal in the area of Surface Engineering. ON-SURF aims, through the mobilization of the different actors that make up the consortium, to implement a technological competence center under this strategic theme to catapult companies to the international market through innovative products, integrating new manufacturing and engineering processes.
